NOTE	<ol style="list-style-type: none"> <li>1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.</li> <li>2. Ripple &amp; noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf &amp; 47uf parallel capacitor.</li> <li>3. Tolerance : includes set up tolerance, line regulation and load regulation.</li> <li>4. Length of set up time is measured at first cold start. Heat sink HS1 must have safety isolation distance with system case.</li> <li>7. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to "EMI testing of component power supplies."</li> <li>8. **Suggested Application**

**1.Backup connection for AC interruption**

(1) Please refer to the Fig1.1 for suggested connection.

The power supply charges the battery and provides energy to the load at the same time when the AC main is OK.

The battery starts to supply power to the load when the AC mains fails.

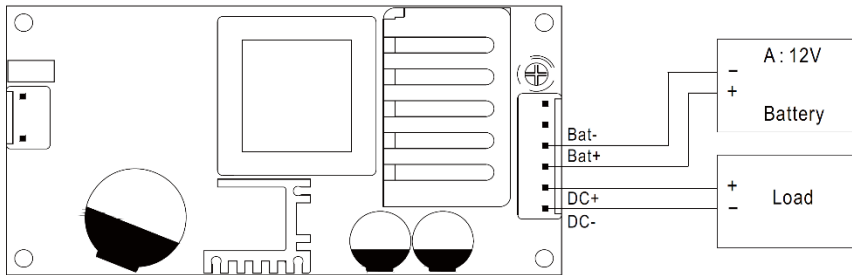

Fig 1.1 Suggested system connection

**2.Alarm Signal for AC OK and Battery Low**

(1) Alarm Signal is sent out through " Battery Low " pins.

(2) An external voltage source is required for this function. The maximum applied voltage is 50V and the maximum sink current is 30mA.

(3) Table2.1 explains the alarm function built in the power supply

Function	Description	Output of alarm
AC OK	The signal is "High" when the power supply turns on	High (12 ~ 13.8V)
AC Fail	The signal turns to be "Low" when the power supply turns OFF	Low (0V)
Battery Low	The signal is "Low" when the voltage of battery is under A:11V	Low (0.3V max. at 30mA)
	The signal is "High" when the voltage of battery is above A:11V	High or open(External applied voltage 50V max.)
